

University of Texas at Arlington
Department of Civil Engineering
CE 5384 (002, 003): Concrete Bridge Design, Fall 2014

Catalog Data	CE 5384 (002, 003): Concrete Bridge Design
Credits	3
Catalog Description (2014-2015)	Analysis and design of concrete bridges for vehicles using American Association of State Highway and Transportation Officials Load and Resistance Factor Design (AASHTO LRFD) specifications. Covers bridge type selection, preliminary design, bridge design loads, bridge deck design, shear design including strut-and-tie model, AASHTO limit states, torsion design, substructure design, and construction practices, maintenance issues.
Prerequisites	CE 4363 or CE 5309
Class Schedule	Lecture: T Th 3:30 – 4:50 PM, Room 100 Geoscience (GS) Help Session: T Th: 10:00 am – 12 noon, Room 265 ELB
Instructor	Nur Yazdani, Ph.D., P.E., CE Professor Office: 430 NH; Office hours: M W: 2 PM – 4 PM Faculty Profile: https://www.uta.edu/profiles/nur-yazdani I am also usually available in my office at other times, except just before class periods. Alternately, you may schedule an appointment by phone or e-mail. Phone: (817) 272-0676 (Office); FAX: (817) 272-0371; E-mail: Yazdani@uta.edu
Teaching Assistant	Md. Istiaque Hasan, Ph.D. Student; Office: Room 265 ELB Office hours: T Th: 10:00 am – 12 noon; Phone: 817-272-0816 E-mail: mdistiaque.hasan@mavs.uta.edu
Course Material	Required Material: <ul style="list-style-type: none"> • <i>Design of Highway Bridges: An LRFD Approach</i>, 3rd Edition, by Barker and Puckett, John Wiley & Sons, Inc., 2013. • <i>AASHTO LRFD Bridge Design Specifications</i>. Washington, D.C., American Association of State Highway and Transportation Officials, U.S. Customary Units, 7th Ed., 2014. • Lecture Slides: available on Blackboard (http://elearn.uta.edu) Optional Reference Material: <ul style="list-style-type: none"> • <i>PCI Bridge Design Manual</i>, by Precast/Prestressed Concrete Institute. • <i>Bridge Engineering</i>, by Tonnias, McGraw-Hill, Inc. • Notes on LFD for Reinforced Bridges, PCA. • TxDOT Bridge Design Supplementary Information.

Computer Accounts	<ul style="list-style-type: none"> • Class e-mail will be sent to your UT Arlington account through the Blackboard course web site. If you use another primary e-mail account, you need to regularly check your UT Arlington e-mail for important information. • Lecture slides, this syllabus, assignments, assignment solutions, term project details, grades, etc. will be available on Blackboard (http://elearn.uta.edu).
Course Usefulness	<p>So far, in your previous courses, you have acquired proficiency in various structural design areas such as reinforced concrete design and prestressed concrete design. The previous courses laid the groundwork for your transformation into a structural designer. In the basic design courses, the elements of concrete design were introduced, together with the basics of strength design and serviceability. However, advanced topics needed for practical concrete design were not covered due to time limitation. This course will build upon your knowledge base from your previous courses, and will provide you with the skills needed to analyze and design real life bridge structures. Highway bridges are very important structures that are integral and vital components of the transportation infrastructure. This infrastructure plays a critical role in safely and efficiently moving people and goods across this country and all over the world. Well-designed and long-lasting highway bridges are essential to the operation of this infrastructure. Bridges are constantly evolving with the application of new materials, design specifications and innovative bridge systems. This course will enable you to become familiar with the application of the latest AASHTO provisions to concrete bridge design. Advanced techniques needed to design real life bridges using latest specifications, methods and software will be involved. The course instruction will be heavily practice and technology oriented, with broad emphasis on practical applications and methodology. Material you learn in this course is critical to your becoming a successful and valued bridge engineer in today's marketplace.</p>
Student Responsibility	<p><u>Deadlines and Instructions</u></p> <p>Following professional conduct that you will encounter in practice, the course contains strict deadlines and instructions. Please read instructions carefully and schedule your activities accordingly to meet schedules. You should check your mavmail and the Blackboard course web page regularly, and note other announcements, on-line and in class.</p> <p><u>Class Participation</u></p> <p>Class participation can be achieved in two ways. I shall ask you questions in class on the previous lectures, and on the material currently being discussed. You should be prepared to answer these questions, and should also participate by asking questions, suggesting ideas, and performing in-class group activities that I assign. I prefer an interactive class-room where the instructor and the students freely participate in active learning. Of course, you cannot participate in class unless you attend it! DE students are exempt from class participation.</p> <p><u>Group Work</u></p> <p>You must work in groups of three (if possible) for the following activities: homework, class projects and term project. The groups should represent diversity in terms of student background and academic performance. You should participate in all group activities and make a fair contribution to the group effort. DE students are exempt from group participation, unless they specifically request it.</p>

	<p><u>Homework</u> Required homework will be due at the beginning of the period on the due date - one solution set per group. Use engineering paper if possible, one side of each paper, and box the solution. On the inside, put the name of the group leader, all other participating group members, the date, and the assignment number. If a student's name appears on a solution set, it certifies that he/she has participated in solving some of the problems and understands all the solutions. If this turns out not to be the case, both the student in question and the group leader will be considered to have cheated and will be dealt with accordingly. Please keep a copy of your homework before it is submitted in case the homework is lost or misplaced. Late homework will be accepted for up to two weeks after the due date. A penalty of 20% for each 24 hours will be assessed on late homework. However, if a group abuses this privilege on a regular basis, it will be withdrawn. One group member should be designated the leader for each homework. The leader will be responsible for coordinating the work and making sure everyone in the group understands all the problem solutions before they are handed in (Hint: Try to set up each problem individually, then get together to work out the details). After being a group leader, an individual may not be leader again until everyone else in the group has held the position. DE students are exempt from group homework submission, unless they specifically request it.</p> <p><u>Tutorial Class Attendance</u> Two tutorial sessions per week will be arranged outside the regularly scheduled class period. Although the tutorial class is not mandatory, it is highly recommended. The tutor will provide you with helpful hints on the homework, solve additional problems, help you with your term project and software usage.</p> <p><u>Term Project</u> A group term project is required as a part of this class. The topic will be practice oriented, will require code usage, latest design software and drafting applications. The instructor will supply the class with the project concept during the second week of classes. A written proposal oral final presentation and written final report are required. The project grade will be determined as follows:</p> <p style="padding-left: 40px;"> Proposal: 30% Oral presentation: 30% Final report: 40% </p> <p>You must be able to understand, explain and execute your group project work. About half of the group project grade will be based on group activities, and the other half based on your individual contribution. Therefore, when asked, you should be able to explain and clearly identify your own contribution. DE students are exempt from group participation in the term project, unless they specifically request it.</p>
Professional Component of the Course	<p>The course will teach graduate level structural engineering students how to efficiently analyze and design real life concrete bridge structures, using the latest available professional codes, methods and tools. Professional level group term projects are also involved.</p>

Topics/ Tentative Time Schedule/ No. of Sessions	<u>Course Topics</u>	<u>Dates (2014)</u>	<u>Sessions</u>
	Introduction and Background	08/21	1
	Design process for bridges, aesthetics, bridge types, material selection, layout, forms, shapes, costs, analysis methods.	08/26 – 08/28	2
	Introduction to the AASHTO LRFD Bridge Specifications, limit states, vehicles, other factors used in loading.	09/02 – 09/04	2
	Bridge loads, load factors, lateral loads, load combinations, load distribution.	09/09 – 09/11	2
	Project proposals due	09/16	---
	Introduction to prestressed concrete, design process, allowable stresses, prestress losses, shear/torsion, camber and deflections.	09/16 – 09/23	3
	Preliminary bridge design	09/25	1
	Bridge deck design, empirical and traditional methods, design moments, thickness and reinforcement, service checks.	09/30 – 10/02	2
	Shear design, modified compression field theory, strut and tie model.	10/07 – 10/09	2
	TEST 1	10/14	1
	Single span, non-composite, box beam bridge design	10/16 – 10/23	3
	Concrete I or Bulb T stringer bridge design	10/28 – 11/04	3
	Guest speaker	11/06	1
	Concrete slab bridge design	11/11 – 11/20	3
	Field Trip (Tentative)	11/25	1
	Test 2	11/27	1
	Project Presentations	12/02	1
	Optional Final Test (comprehensive)	12/11 (2 – 4:30 PM)	1

Grading Criteria	<p>The overall course grade will be based on the performance of each student in the following categories: homework, tests, term project, and lecture participation.</p> <p>The following lists the published grade percentage distributions for in-class students (section 001):</p> <table data-bbox="410 317 834 464"> <tr> <td>Homework:</td><td>19%</td></tr> <tr> <td>Two tests:</td><td>27% each</td></tr> <tr> <td>Term project:</td><td>20%</td></tr> <tr> <td>Class participation:</td><td>7%</td></tr> </table> <p>The following lists the published grade percentage distributions for DE students (section 002):</p> <table data-bbox="410 611 842 716"> <tr> <td>Homework:</td><td>20%</td></tr> <tr> <td>Two tests:</td><td>29% each</td></tr> <tr> <td>Term project:</td><td>22%</td></tr> </table> <p>A weighted grade of 90 or above overall is guaranteed an A, 80 or above at least a B, 70 or above at least a C, and 60 or above at least a D.</p>	Homework:	19%	Two tests:	27% each	Term project:	20%	Class participation:	7%	Homework:	20%	Two tests:	29% each	Term project:	22%
Homework:	19%														
Two tests:	27% each														
Term project:	20%														
Class participation:	7%														
Homework:	20%														
Two tests:	29% each														
Term project:	22%														

COURSE POLICIES

Examinations: There will be two regular tests during the semester and one optional final examination. The instructor understands that students may have a down day once in a while, which may affect their test grades. As a compensation for extenuating circumstances affecting your test grades, you may take the optional comprehensive final examination, which will be scheduled during the final examination week. If you take this optional test, the grade from this test will substitute the grade from one of the regularly scheduled tests. If you miss any test for emergency reasons, a cumulative make-up test will be scheduled during the last week of classes. All students missing any test will be given the opportunity to take this make-up test. The student must submit admissible evidence of emergencies that prevented them from taking the regularly scheduled examination.

Attendance: At The University of Texas at Arlington, taking attendance is not required. Rather, each faculty member is free to develop his or her own methods of evaluating students' academic performance, which includes establishing course-specific policies on attendance. As the instructor of this course, I strongly encourage you to make every effort to attend all lectures (in class or on-line for DE students). I may cover material from outside the text-book which will be useful supplementary material. I shall also use visual aids, practical cases, class interaction and thoroughly worked out example problems to enhance learning. In my opinion, keeping attendance record is a poor and inefficient practice. However, students attending lectures (section 001) will be indirectly credited through group activities (see grading policy and group activities). In emergency situations, absence may be excused with appropriate documentation. You should let me know in advance, when possible, and submit the documentation. You should make up any materials missed due to absence.

Drop Policy: Students may drop or swap (adding and dropping a class concurrently) classes through self-service in MyMav from the beginning of the registration period through the late registration period. After the late registration period, students must see their academic advisor to

drop a class or withdraw. Undeclared students must see an advisor in the University Advising Center. Drops can continue through a point two-thirds of the way through the term or session. It is the student's responsibility to officially withdraw if they do not plan to attend after registering. **Students will not be automatically dropped for non-attendance.** Repayment of certain types of financial aid administered through the University may be required as the result of dropping classes or withdrawing. For more information, contact the Office of Financial Aid and Scholarships (<http://wweb.uta.edu/aao/fao/>).

Americans with Disabilities Act: The University of Texas at Arlington is on record as being committed to both the spirit and letter of all federal equal opportunity legislation, including the *Americans with Disabilities Act (ADA)*. All instructors at UT Arlington are required by law to provide "reasonable accommodations" to students with disabilities, so as not to discriminate on the basis of that disability. Any student requiring an accommodation for this course must provide the instructor with official documentation in the form of a letter certified by the staff in the Office for Students with Disabilities, University Hall 102. Only those students who have officially documented a need for an accommodation will have their request honored. Information regarding diagnostic criteria and policies for obtaining disability-based academic accommodations can be found at www.uta.edu/disability or by calling the Office for Students with Disabilities at (817) 272-3364.

Title IX: The University of Texas at Arlington is committed to upholding U.S. Federal Law "Title IX" such that no member of the UT Arlington community shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity. For more information, visit www.uta.edu/titleIX.

Academic Integrity: Students enrolled all UT Arlington courses are expected to adhere to the UT Arlington Honor Code:

I pledge, on my honor, to uphold UT Arlington's tradition of academic integrity, a tradition that values hard work and honest effort in the pursuit of academic excellence.

I promise that I will submit only work that I personally create or contribute to group collaborations, and I will appropriately reference any work from other sources. I will follow the highest standards of integrity and uphold the spirit of the Honor Code.

UT Arlington faculty members may employ the Honor Code as they see fit in their courses, including (but not limited to) having students acknowledge the honor code as part of an examination or requiring students to incorporate the honor code into any work submitted. Per UT System *Regents' Rule* 50101, §2.2, suspected violations of university's standards for academic integrity (including the Honor Code) will be referred to the Office of Student Conduct. Violators will be disciplined in accordance with University policy, which may result in the student's suspension or expulsion from the University.

Student Support Services Available: The University of Texas at Arlington supports a variety of student success programs to help you connect with the University and achieve academic success. These programs include learning assistance, developmental education, advising and mentoring, admission and transition, and federally funded programs. Students requiring assistance academically, personally, or socially should contact the Office of Student Success Programs at

817-272-6107 for more information and appropriate referrals.

Final Review Week: A period of five class days prior to the first day of final examinations in the long sessions shall be designated as Final Review Week. The purpose of this week is to allow students sufficient time to prepare for final examinations. During this week, there shall be no scheduled activities such as required field trips or performances; and no instructor shall assign any themes, research problems or exercises of similar scope that have a completion date during or following this week *unless specified in the class syllabus*. During Final Review Week, an instructor shall not give any examinations constituting 10% or more of the final grade, except makeup tests and laboratory examinations. In addition, no instructor shall give any portion of the final examination during Final Review Week. During this week, classes are held as scheduled. In addition, instructors are not required to limit content to topics that have been previously covered; they may introduce new concepts as appropriate.

Electronic Communication: UT Arlington has adopted MavMail as its official means to communicate with students about important deadlines and events, as well as to transact university-related business regarding financial aid, tuition, grades, graduation, etc. All students are assigned a MavMail account and are responsible for checking the inbox regularly. There is no additional charge to students for using this account, which remains active even after graduation. Information about activating and using MavMail is available at <http://www.uta.edu/oit/cs/email/mavmail.php>.

Student Feedback Survey: At the end of each term, students enrolled in classes categorized as “lecture,” “seminar,” or “laboratory” shall be directed to complete an online Student Feedback Survey (SFS). Instructions on how to access the SFS for this course will be sent directly to each student through MavMail approximately 10 days before the end of the term. Each student’s feedback enters the SFS database anonymously and is aggregated with that of other students enrolled in the course. UT Arlington’s effort to solicit, gather, tabulate, and publish student feedback is required by state law; students are strongly urged to participate. For more information, visit <http://www.uta.edu/sfs>.

Emergency Exit Procedures: Should we experience an emergency event that requires us to vacate the building, students should exit the room and move toward the nearest exit, which is located on the left side of the lecture room. When exiting the building during an emergency, one should never take an elevator but should use the stairwells. Faculty members and instructional staff will assist students in selecting the safest route for evacuation and will make arrangements to assist individuals with disabilities.

Professional Ethics: You will gain confidence in your ability to design and analyze concrete bridge structures only when you do the work yourself. However, you will also learn a lot through discussions with your peers. In order to balance the two goals, the following guideline is provided:

- *Things you may not do:* You should not copy work from others. This includes directly copying homework, tests, project materials, etc, and submitting it as your own work. Furthermore, you should assure that others cannot copy your work. Allowing copying of your material will only hinder the learning of the parties

involved.

- *Things you may do:* You may discuss specific problems related to analysis/design steps, Code usage, efficient design, and project issues with others.

Technology and Practice: The course work will be heavily geared towards technology and practice. Students will be asked to contact outside sources such as design/construction industry and vendors in order to obtain information. Problems in the class and homework will be designed to utilize this information. Commercial software similar to the ones used by industry design offices will be demonstrated in the classroom. Students will be able to use the software from the college computer labs. It is expected that at least one field trip to a bridge construction site will be arranged during the semester, where you can obtain valuable practice oriented knowledge as complementary to the classroom knowledge. Guest speakers from the industry will be invited to speak to the students.

Emergency Phone Numbers: In case of an on-campus emergency, call the UT Arlington Police Department at **817-272-3003** (non-campus phone), **2-3003** (campus phone). You may also dial 911.

Syllabus Change Policy: This syllabus is a guide for the course and is subject to change with advance notice.
