Math 1330-003: Arithmetic Problem Solving
Fall 2015

Instructor: Dr. Theresa Jorgensen

Office Number: PKH 434

Office Telephone Number: 817-272-1321

Email Address: jorgensen@uta.edu

Office Hours: Monday 10-11am, Thursday 2-3pm, or by appointment

Time and Place of Class Meetings: PKH 302 on Tues/Thurs 9:30-10:50am

Description of Course Content: This course is designed to prepare future elementary school teachers *mathematically* to teach math (as opposed to *pedagogically,* which is the goal of ECED/BEEP 4311 and EDML 4372). It does this in two main ways: by teaching math which is relevant (not identical) to the math they will be teaching, and by modeling a math classroom through problem-solving activities, cooperative groups, and holding students responsible for deciding (reasoning) what is correct. Problem solving, operations, numeration systems, patterns and inductive reasoning, number theory, fractions, and number representations are the topics that will be studied.

This course will address three objectives:
- Critical Thinking Skills - to include creative thinking, innovation, inquiry, and analysis, evaluation and synthesis of information.
- Communication Skills - to include effective development, interpretation and expression of ideas through written, oral and visual communication.
- Empirical and Quantitative Skills - to include the manipulation and analysis of numerical data or observable facts resulting in informed conclusions.

Syllabus: **An approximate schedule with topics is given below.**

Unit Topic	#Hours	Activities
1 Problem Solving	5	Poison Books and Pages Time to Weigh Hippos Chickens and Rabbits Anatomy of a Problem
2 Operations	5	Introduction to Operations Properties of Operations Analyzing Operations Word Problem Classification Table Models for Addition and Subtraction

		Models for Multiplication Models for Division Clock Arithmetic
3 Numeration Systems	12	Numeration Systems Zeros and Ones Sticks and Stones Introduction to Bases Regrouping in Other Bases Mayan Addition and Subtraction Driving to Septobasiland Mayan Multiplication Making Groups in Other Bases Division in other Bases Mayan Division Money in Septobasiland Arithmetic in Other Bases
Midterm exam	1	**October 15**
4 Fractions	10	Representations of Fractions The Bagel Problem The Cookie Jar Problem Adding and Subtracting Problems Multiplying Fractions Oranges and Posters Dividing Fractions The Sandwich Problem Dividing Fractions Problem Bank Fractions to Decimals Decimals to Fractions Place Value in other bases
5 Number Theory	10	Factors & Prime Numbers GCF & LCM Divisibility tests Odd and Even in Base 5 Lockers Problem The Stamps Problem How Many Factors? The Three Stooges Stamps Problems
Final Review	1	

Final exam: Wednesday December 17 from 8 – 10:30 am
Last day for automatic withdrawal: Nov 4
As the instructor for this course, I reserve the right to adjust this schedule in any way that serves the educational needs of the students enrolled in this course.

Student Learning Outcomes: There will be almost no lecturing in this course. To help you develop your intuitive reasoning and problem-solving skills, we will spend most of our class time working in small groups on problems from the course packet. An important part of learning to solve problems is being willing to struggle with a problem even after you get stuck, and this is one of the first things you will face this term. You may be surprised by how much you can do if you just keep at it! We will usually discuss the problems in a large group after most groups have finished them. Sometimes you will be asked to write up your ideas and solutions, but always you are expected to think about the problems, participate in solving them, and communicate your ideas with others. Communicating

your ideas clearly to others is as important as developing them in the first place. Note that this is a math *content* course, and not a pedagogy course. We hope that taking this course will help you be a better teacher, but more by setting an example rather than teaching you math methods. Students who come out of this course generally feel a lot more comfortable about teaching math, and about being a mathematical authority in the classroom. Hang in there!

After completing this course, the student should be able to:

- ❖ communicate clear mathematical claims and justifications orally and in writing
- ❖ identify major problem solving strategies, and types of problems in which each is likely to be useful
- ❖ describe and use concrete, pictorial, and symbolic models for computation in place value numeration systems in any base
- ❖ name the major conceptual models for the four arithmetic operations, and identify which is   being invoked in a problem context
- ❖ convert between fraction and decimal representations for rational numbers, and explain and justify general procedures for conversions in both directions
- ❖ determine the prime factorization for any natural number, and use it to compute the number of factors of that natural number
- ❖ provide examples of natural numbers with a given number of factors
- ❖ use number theoretic properties including relative primeness to solve problems

Requirements: College algebra or consent of instructor

Required Textbooks and Other Course Materials: Purchase the Coursepack at Bird's Copy Shop (817-459-1688) at 208 East St. or download the packet from the class materials on Blackboard

Descriptions of major assignments and examinations: The **exams** will be similar in nature to the problems we work in class, but short enough to be completed in the time given. A sample exam will be distributed before each exam in order to give you a closer feel for it, though you should *not*   expect it to serve as an exact blueprint for the real thing. The dates and times for the midterm and final exam (both in our usual room) are given above. Please mark them on your calendar now so as to avoid conflicts. If a conflict arises, *please* see me as soon as possible to resolve it. No make-up exams will be given without prior arrangement.

THE WRITTEN WORK will have two components: write-ups (also called problem reports) and reflections. A write-up is a detailed solution to a problem we discussed in class. These write-ups should be readable independently of any worksheet on which they are based, in good English and either legibly handwritten in ink or word-processed. They should always include the following (although you need not use this form): 1. a statement of the problem at hand, 2. any strategies you used to attack the problem, 3. the solution you obtained, with an explanation of how you got it (and how you know it is complete), and 4. a conclusion that says what we can take with us from the problem. Communication of what you understand (even if it's not a complete understanding) is at least as much the point as finding the solution. The write-ups can be uploaded into Blackboard under Course Materials. I will also sometimes ask you to write a reflection on a rather less concrete issue, like "What does it mean to get stuck?" These will be completed on Blackboard in discussion for all reflections except the last one and will be graded more loosely, more on how much thought went into it than on organization and content.

I will let you know at the time I assign written work when it is due, but typically it will be due in class a week from the time it is assigned. You will have roughly one assignment due per week. Each student is allowed **one late submission per semester**, but all written work must he turned in before the same assignment is handed back to the rest of the class, to receive credit. Late submissions after the first week will be accepted at the discretion of the instructor, with penalties. At the end of the semester, each student will have the opportunity to rewrite one assignment. If you find you are having difficulty with written assignments, I encourage you to consult me, one or the other 1330 instructors, or your classmates, bringing a draft of the paper to go over. Small groups whose members revise each other's drafts historically tend to do better on them.

These are *your* blackboards. Own the classroom.

Attendance: At The University of Texas at Arlington, taking attendance is not required. Rather, each faculty member is free to develop his or her own methods of evaluating students' academic performance, which includes establishing course-specific policies on attendance. As the instructor of this section, **ATTENDANCE AND PARTICIPATION** are a significant part of your grade because this course is more an experience than a set of material to be learned. Most of what I hope will happen for you in this course will take place inside the classroom, working in groups and talking with others. Attendance will be taken by means of a daily sign-in sheet. You may miss up to 2 days (**excused or not**) without penalty; after that your participation grade will drop 4.5 percentage points for each class missed over the 2 days. Arriving late (after we have started class) or leaving early counts as half an absence. It also means missing important announcements, often made at the beginning or end of class. Students with special needs, or other situation which affects their attendance for several consecutive classes, should consult with the instructor as soon as possible. It is also in your interest to participate in the group problem solving sessions since active learning is better than passive learning. Participation includes both small and large group work. Participation in small groups means coming to class prepared (working on a problem outside of class, or bringing requested materials to class), working productively with groupmates, and making sure everyone in your small group follows what you are doing, Large group participation means making some sort of tangible contribution. If you don't feel comfortable answering questions, *ask* one of your own, questions spur discussion as much as answers, and you'll be doing a favor to classmates wondering the same thing.

Grading: Students are expected to keep track of their performance throughout the semester on Blackboard and seek guidance from available sources (including the instructor) if their performance drops below satisfactory levels. Your grade for the course will be determined by two exams (20% each), by attendance and participation (20%), and in large part by written work you will turn in (40%). Assignments can be uploaded on Blackboard. You do not have to turn in assignments on Blackboard, but it is preferred.

Make-up Exams: Please mark both exams on your calendar now so as to avoid conflicts. If a conflict arises, *please* see me as soon as possible to resolve it. No make-up exams will be given without prior arrangement.

Expectations for Out-of-Class Study: Beyond the time required to attend each class meeting, students enrolled in this course should expect to spend at least an additional 9 hours per week of their own time in course-related activities, including reading required materials, completing assignments, preparing for exams, etc.

Grade Grievances: Any appeal of a grade in this course must follow the procedures and deadlines for grade-related grievances as published in the current undergraduate catalog. [For undergraduate courses, see http://wweb.uta.edu/catalog/content/general/academic_regulations.aspx#10.]

Drop Policy: Students may drop or swap (adding and dropping a class concurrently) classes through self-service in MyMav from the beginning of the registration period through the late registration period, which ends on September 2. After the late registration period, students must see their academic advisor to drop a class or withdraw. Undeclared students must see an advisor in the University Advising Center. Drops can continue through a point two-thirds of the way through the term or session. It is the student's responsibility to officially withdraw if they do not plan to attend after registering. **Students will not be automatically dropped for non-attendance**. Repayment of certain types of financial aid administered through the University may be required as the result of dropping classes or withdrawing. For more information, contact the Office of Financial Aid and Scholarships (http://wweb.uta.edu/ses/fao).

Disability Accommodations: UT Arlington is on record as being committed to both the spirit and letter of all federal equal opportunity legislation, including *The Americans with Disabilities Act (ADA), The Americans with Disabilities Amendments Act (ADAAA),* and *Section 504 of the Rehabilitation Act.* All instructors at UT Arlington are required by law to provide "reasonable accommodations" to students with disabilities, so as not to discriminate on the basis of disability. Students are responsible for providing the instructor with official notification in the form of a letter certified by the **Office for Students with Disabilities (OSD).** Students experiencing a range of conditions (Physical, Learning, Chronic Health, Mental Health, and Sensory) that may cause diminished academic performance or other barriers to learning may seek services and/or accommodations by contacting:
The Office for Students with Disabilities, (OSD) www.uta.edu/disability or calling 817-272-3364.
Counseling and Psychological Services, (CAPS) www.uta.edu/caps/ or calling 817-272-3671.

Only those students who have officially documented a need for an accommodation will have their request honored. Information regarding diagnostic criteria and policies for obtaining disability-based academic accommodations can be found at www.uta.edu/disability or by calling the Office for Students with Disabilities at (817) 272-3364.

Title IX: *The University of Texas at Arlington does not discriminate on the basis of race, color, national origin, religion, age, gender, sexual orientation, disabilities, genetic information, and/or veteran status in its educational programs or activities it operates. For more information, visit uta.edu/eos. For information regarding Title IX, visit* www.uta.edu/titleIX.

Academic Integrity: Students enrolled all UT Arlington courses are expected to adhere to the UT Arlington Honor Code:

> *I pledge, on my honor, to uphold UT Arlington's tradition of academic integrity, a tradition that values hard work and honest effort in the pursuit of academic excellence.*
>
> *I promise that I will submit only work that I personally create or contribute to group collaborations, and I will appropriately reference any work from other sources. I will follow the highest standards of integrity and uphold the spirit of the Honor Code.*

UT Arlington faculty members may employ the Honor Code as they see fit in their courses, including (but not limited to) having students acknowledge the honor code as part of an examination or requiring students to incorporate the honor code into any work submitted. Per UT System *Regents' Rule* 50101, §2.2, suspected violations of university's standards for academic integrity (including the Honor Code) will be referred to the Office of Student Conduct. Violators will be disciplined in

accordance with University policy, which may result in the student's suspension or expulsion from   the University. Students would receive zeros for any work submitted under question.

Student Support Services: UT Arlington provides a variety of resources and programs designed to help students develop academic skills, deal with personal situations, and better understand concepts and information related to their courses. Resources include tutoring, major-based learning centers, developmental education, advising and mentoring, personal counseling, and federally funded programs. For individualized referrals, students may visit the reception desk at University College (Ransom Hall), call the Maverick Resource Hotline at 817-272-6107, send a message to resources@uta.edu, or view the information at www.uta.edu/resources.

Electronic Communication: UT Arlington has adopted MavMail as its official means to communicate with students about important deadlines and events, as well as to transact university- related business regarding financial aid, tuition, grades, graduation, etc. All students are assigned a MavMail account and are responsible for checking the inbox regularly. There is no additional charge to students for using this account, which remains active even after graduation. Information about activating and using MavMail is available at http://www.uta.edu/oit/cs/email/mavmail.php.

Student Feedback Survey: At the end of each term, students enrolled in classes categorized as lecture, seminar, or laboratory shall be directed to complete a Student Feedback Survey (SFS).
Instructions on how to access the SFS for this course will be sent directly to each student through MavMail approximately 10 days before the end of the term. Each student's feedback enters the SFS database anonymously and is aggregated with that of other students enrolled in the course. UT Arlington's effort to solicit, gather, tabulate, and publish student feedback is required by state law; students are strongly urged to participate. For more information, visit http://www.uta.edu/sfs.

Final Review Week: A period of five class days prior to the first day of final examinations in the   long sessions shall be designated as Final Review Week. The purpose of this week is to allow students sufficient time to prepare for final examinations. During this week, there shall be no scheduled activities such as required field trips or performances; and no instructor shall assign any themes, research problems or exercises of similar scope that have a completion date during or   following this week *unless specified in the class syllabus*. During Final Review Week, an instructor   shall not give any examinations constituting 10% or more of the final grade, except makeup tests and laboratory examinations. In addition, no instructor shall give any portion of the final examination during Final Review Week. During this week, classes are held as scheduled. In addition, instructors   are not required to limit content to topics that have been previously covered; they may introduce new   concepts as appropriate.

Emergency Exit Procedures: Should we experience an emergency event that requires us to vacate the building, students should exit the room and move toward the nearest exit to the right of room 302. There is a stairwell located there. When exiting the building during an emergency, one should never take an elevator but should use the stairwells. Faculty members and instructional staff will assist students in selecting the safest route for evacuation and will make arrangements to assist handicapped individuals.
